

Mohammed Al-Battashi

Frontend Developer

battashi.dev@gmail.com • github.com/Battashi-Dev • linkedin.com/in/mohammed-al-battashi-952374416 • battashi.dev

SUMMARY

Frontend developer who loves turning ideas into real products. I enjoy writing clean, maintainable code, learning new technologies, and building projects that solve real-world problems. Comfortable working across the full React/TypeScript stack, with a strong focus on component architecture, form validation, and responsive, accessible UI.

TECHNICAL SKILLS

HTML	CSS	JavaScript	TypeScript	React
Bootstrap	Chakra UI	React Hook Form	Zod	Vite
Git	GitHub			

PROJECTS

Expense Tracker

github.com/Battashi-Dev/expensive-tracker | Live: <https://expensive-tracker-wheat.vercel.app/>

- Built a full-featured expense tracker using React and TypeScript with localStorage persistence, so data survives page reloads without a backend.
- Implemented form validation with Zod and React Hook Form, separating raw user input from stored data records for cleaner type safety.
- Designed custom hooks to manage state and business logic independently from UI components, keeping the codebase modular and testable.
- Styled the interface with Chakra UI, focusing on responsive layout and consistent design tokens across components.

Personal Portfolio

battashi.dev | github.com/Battashi-Dev | Live: <https://portfolio-six-xi-op7aaktm22.vercel.app/>

- Designed and built a personal portfolio site with React, TypeScript, and Chakra UI, featuring a custom theme, responsive multi-section layout, and reusable data-driven components.
- Refactored repeated UI patterns (navigation, social links, project cards, skills) into mapped, typed data structures to eliminate duplication and simplify future updates.

APPROACH & GROWTH

- Self-directed, project-based learner: builds full projects first to see how pieces connect, then rebuilds weaker areas in isolation to reinforce fundamentals.
- Deliberately practices core syntax recall over autocomplete-assisted development to build durable, transferable skills.
- Actively exploring full-stack development, with a goal of expanding from frontend-focused work into complete end-to-end applications.

AVAILABILITY

Open to freelance work and new opportunities. Let's build something amazing together.
